

## **BIO – Conor Reynolds**

Conor Reynolds is Program Manager of Air Quality & Climate Change Policy at Metro Vancouver. Conor has responsibility for overseeing the development of strategies, programs and policies that aim to improve regional air quality and enhance local government climate action. He has led or co- led the development of a number of new policies that will reduce greenhouse gas emissions from Metro Vancouver corporate operations, including policies on energy management, fleet planning, and carbon pricing. Conor has a PhD in Resource Management and Environmental Studies, and a Master's in Mechanical Engineering, both from UBC. This interdisciplinary background drives him to pursue smart environmental policy-making for local governments that is evidence-based, effective, and implementable. Conor is a registered Professional Engineer in BC, and currently serves as the Chair of Engineers and Geoscientists BC's Climate Change Advisory Group, which advises the Association's Council on climate change issues and develops resources for members.
